Automated Live Streaming for Sports

TebWeb is excited to offer a unique system to help any school or local sports league live stream all of their contests to the public in a cost effective and efficient way.

Our systems operate completely automated, and once installed at the venue, are programmed remotely to automatically start and stop streaming at specific times, and even produce an on-screen “score bug” similar to network television broadcasts.

The heart of our system is an automated “robot camera.”

Utilizing artificial intelligence, the camera automatically follows the action. It is more involved than just following people or the ball--it understands and follows the action of the sport it is programmed to cover.

Basketball, volleyball, soccer, ice hockey, rugby or football. It covers the play similar to how a human operator would.

As a way to generate revenue: sponsor logos, mentions, and even video commercials can be inserted into the live stream in different ways—all completely automated!

A “two box” ad placement similar to network TV

Find out how we can help you bring your sports coverage to a larger audience!
